

# Streamlining Provider Data Management for Providers and Practice Managers

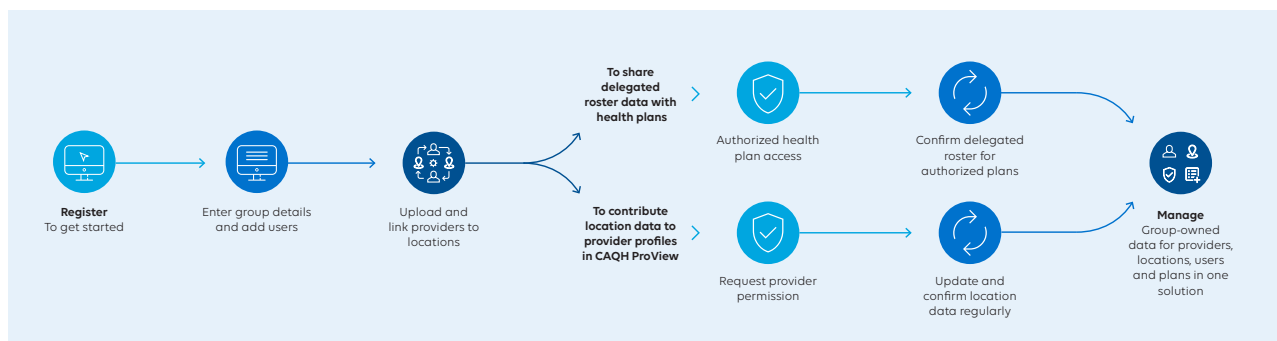

United Healthcare is committed to supporting the needs of physician practices and recognizes that provider data management is a critical and often time-consuming function. This is why we are partnering with CAQH to deliver the **Provider Data Portal for Groups** – a single resource to manage provider data quickly, efficiently and accurately.

The portal centralizes collection, management and distribution of provider data across multiple health plans.

- Allows providers and practice managers to submit a single, delegated roster to the health plans they designate in a format that meets the requirements of each plan without customization.
- Includes automated updates to eliminate the need to revise roster submission formats when health plans make changes.
- Helps ensure submission of a complete and accurate roster through built-in data quality checks and intuitive prompts.
- Manages group and location data for delegated rosters and individual provider profiles in one convenient solution.
- Ensures location data is represented in health plan directories so patients can find you.
- Ensures business information is accurate for billing and claims purposes.
- Consolidates the details and status for all providers, locations, and plans associated with your group in one secure, location.

United Healthcare is making the service available to its provider community available at no change.

## How It Works

To start streamlining your provider data management processes today, mail [providerengagement@caqh.org](mailto:providerengagement@caqh.org) or visit [go.caqh.org/UHCPProViewForGroupsRegistration](http://go.caqh.org/UHCPProViewForGroupsRegistration).
